Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Drawings

1. Figures 29-33 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Information Disclosure Statement

2. The information disclosure statement filed on March 14, 2002 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. It has been placed in the application file, but the information referred to therein, except for the US patent, has not been considered.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Okanou et al (USP 5,701,333).

Art Unit: 2634

Consider claim 1. Referring to Figs. 6 and 7, Okanoué et al disclose a diversity receiver, that could be used as a CDMM receiver, comprising a weighting unit (87-1 ~ 87-N*K) for each of multiple signal paths (77-1 ~ 77-N*K) wherein, if “a prescribed signal component” (the output signal from Subtracting CKT) is below a threshold, the weighting unit applies weighting to the output (see col.9, ll. 9-14), a combiner (79-1 ~ 79-M+1) and a data discriminating unit (82) for determining data based on the output of the combiner. The data discriminating unit of Okanoué is not shown in detail but is inherent in a data receiver.

Consider claim 2. Col.9, ll.6-9 teaches that if the output of the comparator, which reads on the claimed “prescribed signal component,” is greater than the threshold, 1 is supplied as the weighting factor.

Allowable Subject Matter

5. Claims 3-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: No prior art has been found to disclose a CDMA receiver where weighting is applied to each of multipath when the **received signal power** on the respective path is **below** a prescribed level.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sakoda et al (US Patent No. 6,021,125) and Okanoué et al (US Patent No. 5,444,721)

Art Unit: 2634

each teach the application of weighting to each signal path when the **received signal power** on the respective path is **over** a prescribed threshold. See col.15, ll.37-44 and col.7, ll.1-11, respectively.
